

J&J Institute Telementoring

Innovation in healthcare is happening at a rapid pace and the demands on physicians continue to increase, making access to education and other physicians difficult. We developed Telementoring to create virtual opportunities for physicians to connect and learn.

Enables **virtual clinical collaboration**, using the latest **digital solutions**

Provides for more **individualized learning**

Convenience, no need to travel or take time away from work and home

Expands **learning** and **geographical opportunities**

1 Video feed(s) and audio can be taken from existing hardware within the OR / procedural room

2 Room views are captured by high-definition cameras and/ or wearables

3 The remote person connects to the platform (via their laptop, tablet, or phone) and enters the case digitally and enters the case digitally where they can view multiple feeds and hear audio from the OR.

4 Participants can engage in live two-way audio and video communication with the live team including the ability to share images or videos back to a monitor or the wearables.
